

TOMATOES FROM WILD BOAR FARMS	Available at Redwood Barn 2012
descriptions courtesy of Wild Boar Farms	http://wildboarfarms.com/
<p>BLACK AND BROWN BOAR: One of my first varieties. Discovered in Green Zebra patch years about ten years ago. This looks like a Black Zebra, slightly larger with some lobes. Mid-early to early. 65-75 days. Indet. regular leaf. Pumps out 3-4" fruit like crazy. Aggressive grower and producer. Great flavor, dark earthy tones of rich tomato. Origin- Green Zebra</p>	
<p>LARGE BARRED BOAR: Early to mid-early. Like most dark tomatoes, this is one of my first ripe tomatoes each season. 65-75 days. Indet. regular leaf, grows fairly stocky and not as tall as most indet. 8-12 oz. flattened med. beefsteak fruit. Very meaty. Good to very good production. Good choice for marginal tomato climates. Pink brown with metallic green stripes. Very meaty pink flesh that is very flavorful. Originated from F-2 Black and Brown Boar. The only large tomato in a row of 200. First large striped tomato I had ever seen at the time.</p>	
<p>RED BOAR: Red colored mutation I discovered from Green Zebra. Not related to other red striped tomatoes on the market, some of which are not edible to me, this one has won taste contests. Another top notch performer in the looks, taste, production department. Mid season, 70-75 days. indet. regular leaf. 2-4 oz. good to very good producer. Amazing yellow red stripes, great producer, winner if you want a smaller, juicy sweet tomato.</p>	
<p>PINK BOAR: Looks like a port wine colored Green Zebra. Striking looks, outrageous flavor that is sweet, rich and juicy. Early to mid-season. 70-80 days. indet. regular leaf. 2-4 oz. with good to great production. Aggressive grower. Port wine color with metallic silver green stripes. Dark colored flesh is juicy and very good rich and sweet flavor. Originally from Black and Brown Boar.</p>	

AAA SWEET SOLANO:

120 plants all pure. Mutant discovered in Yellow Boar (Yellow Stripe). Very attractive yellow with green stripes turning deep orange color with gold stripes. Some hang time ability. Stays firm, very sweet with a hint of tropical fruit. Produced huge harvest for 2009. 2 – 4 OZ.

**BERKELEY TIE-DYE HEART:**

Strong assertive flavor of Berkeley Tie-Dye with super dense meaty flesh. Mid season, 75-85 days. Indet. wispy droopy leaf. Good to outstanding production. Wispy droopy leaves look like they need water when they sometimes don't. Wilt leaf gene is common in heart tomatoes. Several shapes of same plant, ranging from blocky-round to long slender hearts. Outstanding assertive tomato flavor. Very meaty with almost no juice. Mutation from Berkeley Tie-Dye.

**PORKCHOP:**

Most "yellow" tomatoes are actually orange. This is a true yellow, starts off yellow with green stripes which ripen to gold. Mid season, 75-85 days. indet. regular leaf. medium size slightly flattened beefsteaks. Great sweet tomato flavor with hints of citrus. Best yellow I have ever had.

**MICHAEL POLLAN:**

Odd shaped mutant from green zebra. Named after the awesome writer, journalist and teacher. (Please read one of his books) Taste is very different from the Green Zebra. Much less tartness, more mild with good sweetness. Very positive response at the Farmers Market. They stuck out and people really liked the flavor. As I ran out later in the season, customers kept asking about them.

BEAUTY KING:

By far the best looking and tasting red yellow bi-color I have tried. Mid to late, 75-90 days. Indet. regular leaf. 12-20 oz. fruit. Good to very good production. Large stunning red yellow bi-color, yellow with flashy red stripes(not blotches). Interior is yellow with bright red streaks, very meaty. Very good sweet tomato flavor. Cross between a Big Rainbow and Green Zebra.

**PINK BERKELEY TIE-DYE:**

Beautiful, early, and very sweet rich flavor. 10 out of 10 people liked it better than Cherokee Purple in a farmers market taste off. Early to mid-early, 65-75 days. Compact indet. regular leaf. 8-12 oz. average. Port wine colored beefsteak with metallic green stripes. Excellent sweet, rich dark tomato flavor. Fabulous. Marginal tomato climate recommended.

**BERKELEY TIE-DYE:**

Warning, high acid content may cause flashbacks. This tomato blows me and a lot of my customers away. A favorite to many of my chefs. Mid-late to late, 75-90 days. indet. regular leaf plants. 8-16 oz. Fair to good production. Green fruit with yellow and red stripes. Interior is a true tri-color. Creamy green flesh infused with various shades of red and yellow. Each of these colors has a different flavor resulting in a spicy, sweet, tart tomato with good acid all in one fruit. Originated from one plant 500, F-2 Beauty King.

**BRADS BLACK HEART:**

6-14 oz. Rare Mutation
One of the only Black Heart Varieties in Existence. Extra Dense, Meaty Flesh, Classic Richness of Dark Tomatoes. Wispy, Droopy Foliage. Do Not Overwater.
