

A plan of action

- Know your urban forest: consider doing an informal survey, make a tree count and species list.
 - Google Earth is a useful tool for assessing distribution of larger, older trees and identifying gaps in the canopy.
 - Set goals for tree plantings each year and decade. Full replacement of your oldest trees within your lifetimes?
 - Provide information resources to your neighbors about tree choices.
 - Identify and work to remove invasive tree species where they compete with new plantings.
 - Consider a community-wide tree planting with TREEDavis.
 - Work with Hedgerow Farms to plant more native species where appropriate.
- *Leave a legacy of new trees and a plan for stewardship.*
